

Cete to support children project

CETE will be collaborating with FEST in the MNU partnered Erasmus+ project: Climate Change Diplomacy, Leadership and Resilience (CHILDRN). One of the major deliverables of the project is to design and deliver a Bachelor's Degree course at MNU in the area of climate change and sustainability. The course is planned to be developed as a MOOC to be delivered online. CETE will be providing instructional design and digital resource development support for the project team. On March 1, 2023, we had the initial meeting with the project team and demonstrated the facilities in e-Studio and e-facilitation room along with the Moodle. This is a 3-year project co-funded by the European Union. Other partners of the project include Université of Liège, Belgium, the Université Paris Cité, France and the University of Economics in Bratislava, Slovakia.
