About the Economic Update

Economic Update is a monthly publication produced by the Research Division of MMA presenting a quick overview of current developments in the Maldivian economy. It also includes a chart pack of global economic and financial indicators. The Economic Update will be posted on MMA's website at the end of each month. This Economic Update is based on the latest available data as at 27 June 2024.

Domestic Economic Developments

Real Economy

Gross Domestic Product

- According to the advance estimates of the Quarterly National Accounts (QNA) for Q4-2023 released by the Maldives Bureau of Statistics (MBS), real GDP grew by 4.0% in Q4-2023 compared to the corresponding quarter of 2022, which is a slight deceleration from the growth of 4.6% in Q3-2023.
 - The annual growth in real GDP during Q4-2023 was mainly driven by the robust performance of the transportation and communication sector. During the quarter, notable growths were observed in sectors such as financial services, wholesale and retail trade, real estate, and human health and social work activities. In contrast, negative contributions were observed from the fisheries sector as well as the tourism sector.

Annual GDP Growth Forecast

- According to the revised forecasts published in October 2023¹, real GDP is projected to grow by 5.5% in 2024. However, growth for 2024 is now expected to be lower-than-projected at 4.9% as per May 2024 forecasts, owing to the lower-than-expected growth in 2023 and the expected moderation in construction, transportation, and communication sectors. As per the estimates of real GDP released by the Maldives Bureau of Statistics in April 2024, following a significant growth of 13.9% in 2022, the annual real GDP growth for 2023 is estimated at 4.0%—4.7 percentage points lower than the forecast of October 2023. The lower-than-projected economic growth was mainly on account of the slower-than-expected outturn in the construction sector, together with the contraction of the tourism sector—owing to the decline in resort bednights. In 2023, real GDP growth was led primarily by the expansion of the transportation and communication sector, which offset the decline in the tourism sector, and the wholesale and retail trade sector.

Tourism

- In May 2024, total tourist arrivals stood at 119,875, registering a slight decline of 1% when compared with May 2023. Meanwhile, total tourist bednights declined by 5% during the month in annual terms, largely driven by the decline in guesthouse bednights. During the month, total guesthouse bednights declined by 33%, while total resort bednights remained broadly unchanged.
 - The slight annual decline in tourist arrivals largely reflected the drop in arrivals from India despite robust growth in arrivals from some of the main source markets of Europe as well as China. During the month, the highest number of tourist arrivals were recorded from China, Germany, Russia, India, and the United Kingdom.
- The operational bed capacity of the tourism industry observed an increase of 1,396 beds when compared with May 2023, while the occupancy rate declined to 40% in May 2024, from 44% in May 2023.
- Overall, for the period January to May 2024, total tourist arrivals increased by 10% in annual terms, while total bednights rose by 7%. During the period, the average stay remained broadly unchanged at 7.7 days when compared with the corresponding period of 2023.

Inflation

- The rate of inflation, as measured by the annual percentage change in the national CPI, rose to 0.8% in May 2024 from -1.1% in April 2024.
 - The largest contribution to the annual rate of inflation during May 2024 came from fish (0.54 percentage points); vegetables (0.39 percentage points) passenger transport by sea (0.17 percentage points); fruits (0.14 percentage points); other food products (0.10 percentage points); personal care appliances, articles and products (0.10 percentage points); other outpatient care services (0.08 percentage points); passenger transport by air (-0.15 percentage points); electricity (-0.21 percentage points) and mobile communication services (-0.79 percentage points).
- The monthly percentage change in the national CPI also rose in May 2024 to 1.5% from -0.8% in April 2024.
 - The largest contribution to the monthly rate of inflation came from electricity (1.25 percentage points); water supply (0.56 percentage points); early childhood and primary education (0.02 percentage points); other food products (0.02 percentage points); mobile communication services (-0.01 percentage points); vegetables (-0.02 percentage points); fuels and lubricants (-0.02 percentage points); passenger transport by air (-0.05 percentage points); fish (-0.10 percentage points) and fruits (-0.15 percentage points).

Public Finance

- Total revenue (excluding grants) observed an increase of MVR560.3 million (or 20%) in March 2024 when compared with March 2023, owing to the increase in tax revenue, despite the decline in non-tax revenue. As such, tax revenue increased by MVR671.1 million, whereas non-tax revenue fell by MVR117.1 million.
- Total expenditure (excluding amortisation) increased by MVR115.3 million (or 3%) in March 2024 when compared with March 2023, stemming from the increase in recurrent expenditure, which rose by MVR559.8 million. Meanwhile, capital expenditure declined by MVR444.5 million in March 2024, when compared with March 2023.
- According to the latest available data, the stock of total government debt (excluding government guaranteed debt) amounted to MVR112.2 billion at the end of Q1-2024, a 1% increase from Q4-2023. Meanwhile, total government debt as a percentage of GDP declined to 98% at the end of Q1-2024, from 103% in Q4-2023.
 - During this period, the increase in government debt was primarily driven by domestic debt.

Monetary Developments

Reserve Money

- Reserve money (M0) further declined by 9% at the end of May 2024, after declining by 1% at the end of April 2024. This mainly reflected the annual decline in net foreign assets, which offset the increase in net domestic assets during the period.
 - The decline in net foreign assets was primarily due to the substantial decrease in foreign asset accumulation during the period, despite the decline in foreign liabilities, which largely reflected the repayment of the swap facility in December 2023, availed from the Reserve Bank of India (RBI) in December 2022. Meanwhile, net domestic assets increased, mainly reflecting the increase in net claims on the central government together with decrease in placements in the overnight deposit facility (ODF).

Broad Money

- Broad money (M2) registered an annual decline of less than 1% at the end of May 2024, from a growth of 1% at the end of April 2024.
 - On the components side, the annual decline in broad money primarily reflected the decline in the transferable deposits, which entirely offset the increase in time and savings deposits denominated in both local and foreign currency. Meanwhile, currency outside depository corporations increased during the month.
 - As for the sources, the annual decline in broad money was solely driven by the decline in net foreign assets, mainly owing to the decline in foreign asset accumulation, despite the decline in foreign liabilities during the period. Meanwhile, net domestic assets increased, largely owing to the growth in claims on the private sector, together with public non-financial corporations. This was followed by the increase in net claims on the central government by the commercial banks and the MMA during May 2024.

Credit to Private Sector

- The annual growth rate of credit to the private sector by the commercial banks remained broadly unchanged at the end of May 2024, from 10% at the end of April 2024.
 - As such, credit to all major sectors (namely tourism, construction, personal loans, and real estate), except for commerce, continued to expand in April 2024, whereby construction sector registered the highest growth during the month, with an annual increase of 24%, which was closely followed by the growth in personal loans. Meanwhile, the tourism sector continued to account for the largest share of bank credit and registered an annual growth of 7%.
 - The annual growth in credit to the construction sector was driven by the increase in credit lent for other construction projects and property development. As for the tourism sector, the annual growth in credit to the sector was largely driven by an increase in credit lent for renovation of resorts together with new resort development and working capital.

External Trade

- Total exports (f.o.b) decreased by 1% in April 2024, when compared with April 2023, while total imports (c.i.f) rose by 6% during the same period.
 - The annual decline in total exports stemmed from the decline in domestic exports, largely owing to lower earnings from frozen skipjack tuna exports, together with canned or pouched tuna exports. In contrast, re-exports increased during the period, which primarily reflected higher earnings from re-exports of jet fuel.
 - The annual increase in import expenditure stemmed mainly from the increase in import expenditure on electrical and electronic machinery equipment and parts, petroleum products, and medical and surgical supplies. In contrast, decreases were observed in import expenditure on transport equipment and parts, and construction-related items.
- Overall, for the period January to April 2024, total exports declined by 4%, whereas total imports increased by 10%, when compared with the corresponding period of 2023.

Gross International Reserves

- Gross international reserves² (official reserve assets) decreased to US\$492.2 million at the end of May 2024, from US\$622.1 million at the end of April 2024. This also was a decline of US\$256.0 million from the US\$748.2 million recorded at the end of May 2023.
 - In terms of growth rates, gross international reserves declined by 21% when compared with April 2024 and by 34% when compared with May 2023.
