About the Economic Update

Economic Update is a monthly publication produced by the Research Division of MMA presenting a quick overview of current developments in the Maldivian economy. It also includes a chart pack of global economic and financial indicators. The Economic Update will be posted on MMA's website at the end of each month. This Economic Update is based on the latest available data as at 3 July 2022.

Domestic Economic Developments

Real Economy

Gross Domestic Product

- According to the advance estimates of the Quarterly National Accounts for Q4-2021 released by the Maldives Bureau of Statistics (MBS), real GDP grew by 49.4% in Q4-2021, compared to the corresponding quarter of 2020, following a growth of 77.4% in Q3-2021. Further, annual real GDP growth was 0.4% higher than the pre-pandemic levels of Q4-2019.
 - The strong rebound in annual real GDP growth during Q4-2021, was mainly driven by the robust recovery of the tourism sector, largely mirroring the base effect of the gradual pickup in tourist arrivals, since the re-opening of international borders in July 2020. In addition, positive contributions were observed in other major sectors of the economy such as transportation and communication, construction, and wholesale and retail trade. Similarly, when compared with the preceding quarter, real GDP observed a marked increase, amid the commencement of the peak season of the tourism sector during the quarter.

Annual GDP Growth Forecast

- According to preliminary estimates, based on the latest Quarterly National Accounts released by the MBS in April 2022, annual real GDP grew by 37.0% in 2021, after a significant decline of 33.5% in 2020 due to the sharp contraction in tourism sector and other major sectors, owing to the impact of the COVID-19 pandemic. Going forward, based on forecasts made in October 2021¹, real GDP is projected to grow by 12.0% in 2022.

Tourism

- In May 2022, both tourist arrivals and bednights increased significantly (by 94% and 43%, respectively) when compared with May 2021 and exceeded pre-pandemic levels of May 2019. Total tourist arrivals, which totalled 125,522 in May 2022, registered an increase of 22% when compared with May 2019, while bednights increased by 20% during the same period.
 - The annual increase in tourist arrivals mainly reflected the surge in arrivals from India and the main source markets of Europe. During the month, the highest number of tourist arrivals were recorded from India, the United Kingdom, Germany, Russia and the United States. The Russian market, which was the top source market in 2021, fell to the seventh position in April 2022 following the suspension of flights from Russia to the Maldives in March 2022 owing to the war in Ukraine. However, its market share rose to the fourth position in the review month owing to the resumption of Aeroflot flights in May 2022.
- The operational bed capacity of the tourism industry observed an increase of 9,305 beds when compared with May 2021, while the occupancy rate rose to 48% in May 2022, from 40% in May 2021.
- Overall, for the period of January to May 2022, total tourist arrivals increased by 55% in annual terms while bednights increased by 40%. Compared to pre-pandemic levels of 2019, tourist arrivals recorded a decline of 6%, although bed nights registered a growth of 13%. In May 2022, the average stay declined to 8.2 days, from 9.0 days in the corresponding period of 2021.

Inflation

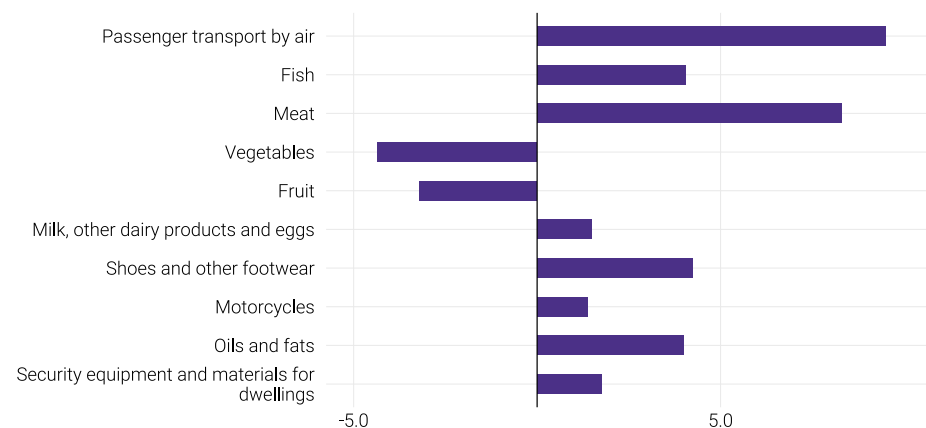

- The rate of inflation, as measured by the annual percentage change in the national CPI, rose to 2.5% in May 2022, from 1.2% in April 2022.
 - The largest contributors to the annual rate of inflation during May 2022 came from petrol for personal transport equipment (0.3 percentage points); meat (0.3 percentage points); fruits (0.3 percentage points); medicines (0.3 percentage points); restaurants and cafés (0.2 percentage points); fish (0.2 percentage points); narcotics (0.1 percentage points); mobile communication services (-0.2 percentage points) and internet access provision and net storage services (-0.1 percentage points).
- The monthly percentage change in the national CPI edged up to 0.67% in May 2022, from 0.27% in April 2022.
 - The largest contribution to the monthly rate of inflation came from passenger transport by air (0.25 percentage points); fish (0.17 percentage points); meat (0.10 percentage points); dairy products (0.06 percentage points); shoes and other footwear (0.04 percentage points); motorcycles (0.04 percentage points); vegetables (-0.10 percentage points) and fruits (-0.08 percentage points).

Public Finance

- According to the latest available data, total revenue (excluding grants) observed an increase of MVR520.6 million (or 33%) in April 2022 when compared with April 2021, mainly driven by a growth in tax revenue, followed by a growth in non-tax revenue. As such, tax revenue rose by MVR411.1 million, while non-tax revenue increased by MVR109.5 million.
- Total expenditure (excluding amortisation) rose by MVR69.2 million (or 3%) in April 2022 when compared with April 2021, mainly due to an increase in capital expenditure, which posted an increment of MVR192.7 million, while recurrent expenditure decreased by MVR123.5 million.
- According to the latest available data, the stock of total government debt (excluding government guaranteed debt) amounted to MVR84.8 billion at the end of Q1-2022, a 6% increase from Q4-2021. Meanwhile, total government debt as a percentage of GDP fell to 97% at the end of Q1-2022 from 104% in Q4-2021.
 - During this period, the increase in government debt was primarily driven by domestic debt.

Monetary Developments

Reserve Money

- Annual reserve money (M0) growth accelerated to 9% at the end of May 2022, from 3% at the end of April 2022, mainly due to the slowdown in the decline of the net domestic assets. However, growth in net foreign assets decelerated during the period.
 - Net domestic assets declined mainly due to the increase in net claims on central government and increase in overnight deposit facility (ODF) placements by the commercial banks, as well as due to the fall in claims on commercial banks. Despite the decline in foreign asset accumulation, net foreign assets registered a growth owing to the significant decline in foreign liabilities, largely reflecting the base effect of the repayment of the swap with the Reserve Bank of India (RBI).

Broad Money

- Annual broad money (M2) growth fell slightly to 20% at the end of May 2022 from 21% in April 2022.
 - On the components side, the annual growth in broad money was primarily driven by an increase in quasi money, mainly owing to a substantial growth in transferable deposits denominated in foreign currency, together with time deposits denominated in local currency. In addition, savings deposits denominated in both local currency and foreign currency, together with time deposits denominated in foreign currency recorded moderate increments during the review period. Meanwhile, narrow money also observed a notable increase, owing to a substantial increase in transferable deposits in local currency.
 - As for the sources, the annual broad money growth was mainly driven by the significant rise in net foreign assets, mainly owing to the decline in foreign liabilities of the banking system, together with the increase in foreign assets of the banking system. Similarly, net domestic assets also increased, due to the rise in net claims on the central government by the commercial banks, while the growth in credit to public nonfinancial corporations and private sector also contributed notably.

Credit to Private Sector

- The annual growth rate of credit to the private sector by the commercial banks remained unchanged at 2% at the end of May 2022.
 - As for the composition of credit to the private sector, growth rates were observed in credit extended to all major sectors except for the tourism sector and construction sector, with credit extended as personal loans having observed the largest increase. Credit extended to the tourism sector, which accounts for the highest share of bank credit, registered an annual decline of 6%, while credit to the construction sector marginally declined in May 2022.
 - The annual decline in credit to the tourism sector was mainly driven by a marked decline in credit lent for new resort development and renovation of resorts, despite the increase in credit lent in the form of working capital.

External Trade

- Total exports (f.o.b) declined by 3% in May 2022 when compared with May 2021, while total imports (c.i.f) increased by 51% during the same period. In monthly terms, both total exports and total imports declined by 11% and 6% in May 2022, respectively.
 - The annual decline in total exports stemmed mainly from the fall in domestic exports, despite an increase in re-exports. The increase in re-exports was primarily due to re-exports of jet fuel. As for domestic exports, it declined mainly owing to a fall in earnings from frozen skipjack tuna, whilst export earnings increased from canned tuna and fresh or chilled yellowfin tuna.
 - As for the annual increase in total imports, the most significant increase was observed in the imports of petroleum products. Further, increases were observed in import of food items, transport equipments and parts, construction-related imports, machinery and mechanical appliances and parts; and electrical and electronic machinery and equipments and parts.
- Overall, for the period of January to May 2022, both total exports and total imports increased by 37% and 34%, respectively, when compared with the corresponding period of 2021.

Gross International Reserves

- Gross international reserves² (official reserve assets) declined to US\$808.0 million at the end of May 2022, from US\$829.0 million at the end of April 2022. Similarly, this was a decline from the US\$926.1 million recorded at the end of May 2021.
- In terms of growth rates, gross international reserves recorded a 3% decline when compared with April 2022, while a decline of 13% was registered when compared with May 2021.
